Total			631	3,106	857	16,410	274	553	1,209	7,058	4,186	1,286	378		2,064
[natural gas]			[79.8]	[678.5]							[1289.8]				

Notes:

¹ Direct natural gas savings are savings from use of more efficient natural gas appliances. Indirect natural gas savings are reductions in natural gas at power plants due to use of more efficient electric appliances.

Indirect gas savings assume that half the power saved at power plants would be generated with natural gas.

² Value of energy savings is based on energy savings and average state energy prices. This value does not take account of the incremental cost of more efficient products.

³ Net present value is the total monetary value of bill savings achieved by products sold under the standards between now and 2030 minus the total incremental product cost incurred by purchasers as a result of the standards over the same period expressed in current dollars. Both costs and savings are discounted using a 5% real discount rate.

⁴ Commercial boilers, pool heaters, and residential boilers and furnaces save natural gas. Gas savings are expressed in cubic feet and enclosed in brackets to distinguish from electricity savings.

⁵ Residential furnaces and boilers include both natural gas and oil furnaces and boilers as well as furnace fans. Annual savings per unit, incremental cost per unit and pay back period shown here are just for gas furnaces and furnace fans, which are the most common of these products. For these calculations, gas furnace values are enclosed in brackets and listed below furnace fan values.
